

COORDINATED, AUTONOMOUS, UNMANNED.

In a milestone demonstration, two Boeing X-45A unmanned aircraft, controlled from the ground by a single pilot, successfully operated together in a coordinated flight. This critical test validates the vast potential of unmanned combat air vehicles to multiply force in high-threat environments while reducing human risk. With proven performance, Boeing is once again helping to bring the vision of J-UCAS to reality.

This ad, for Boeing Integrated Defense Systems, highlights another important milestone for the X-45 Joint Unmanned Combat Air System. The ongoing flight test phase of this transformational program continues to demonstrate the potential for unmanned combat air vehicles in the future battlespace. The ad will run in defense and industry trade publications, reaching U.S. Air Force and U.S. Navy customers.
